

- Dr. Elliot described the final exam
- James S. presented first, and they presented a system for teams to work together on coding projects called DevOP. It was electron based, and it used an interaction between the connected clients and a server with database. They had issues with React failing to bind functions
- Cody E. presented second with an app that scanned barcodes in order to manage warehouse or household inventories called Quik-Ventory. They struggled with learning a new language and were unable to implement some functions such as login registration or item details.
- Rebecca's group presented third, with a zoo region guide app that was designed for mobile use. There was one missing requirement and around 3 problems.
- Christian S. presented last with an application that assists with budgetary needs. It searches and monitors stocks, tracks budgets, and offers suggestions.
